

ALARMS And Managing Unexpected Events

How do you prepare and deal with human startle response and managing unexpected events? The startle response is a defensive response to sudden or threatening stimuli, such as sudden noise or sharp movement, and is associated with negative affects. The reliability in modern technically advanced aircraft has created an undesirable conditioning of pilots to expect that things will not go wrong. When things do go wrong, it can be a surprise and affect the way a pilot thinks or acts. At this FAASTeam event we will explore the startle reflex and how to manage the unexpected when it occurs.

Directions: From County Road D, turn east onto County Road 11.5 and follow the signs.
